

# WHAT IS UCaaS?

UCaaS refers to a phone system that uses Voice over Internet Protocol to provide a Cloud based phone system for businesses. Often this service is provided by a network service provider as part of an overall network solution.

## Voice and Telephony

UCaaS aims to eliminate the common problems that companies face when keeping people connected. Services integrated into your UCaaS technology, can provide access to any form of messaging. Instant messages, voicemail, transcriptions, and social media chat create workplace efficiency when used correctly.

## Video and Meeting Solutions

The Cloud ensures that your employees do not need to work in the same building to collaborate on projects together. It is possible to share files, host conversations and meetings, and launch presentations from a computer, tablet, or smartphone.

## Presence

UCaaS aims to eliminate the common problems that companies face when keeping people connected. Services integrated into your UCaaS technology, can provide access to any form of messaging. Instant messages, voicemail, transcriptions, and social media chat create workplace efficiency when used correctly.

## Mobility and Apps

UCaaS aims to eliminate the common problems that companies face when keeping people connected. Services integrated into your UCaaS technology, can provide access to any form of messaging. Instant messages, voicemail, transcriptions, and social media chat create workplace efficiency when used correctly.
